

# Telehealth made easy.

VirtualClinic+ is Canada's most  
comprehensive Telehealth platform.

VirtualClinic+ is a web-based telehealth platform designed to provide physicians and clinics with a convenient and easy way of adding telehealth to their practice.

What sets VirtualClinic+ apart is that it supports both longitudinal and episode care. Family physicians can offer VirtualClinic+ to patients in their practice, but we also provide a platform for physicians who are interested in offering care to the estimated 4.8 million Canadians without a family doctor. Our platform is designed to improve access to quality care and ultimately drive better health outcomes for everyone.

You can use VirtualClinic+ on any EMR platform. If you are a physician or clinic using OSCAR EMR, you'll have access to additional capabilities and integrations that make your telehealth practice even easier!

**virtualclinic+**

WELL Health VirtualClinic+ focuses on providing modern, digital solutions to physicians. Our mission is to positively impact health outcomes by leveraging technology to empower patients and support doctors.

## Core Telehealth Features

### Easy-to-Use

NO application downloads for you or your patients. We're the most intuitive telehealth platform available.

### Physician-Built

The Physician–Patient relationship is at the center of VirtualClinic+. You have full practice autonomy.

### Safe and Secure

Rest easy knowing that telehealth visits are secure and confidential via phone, video, and messaging.

### Automated

Our platform integrates seamlessly with your EMR to make telehealth easy for you and your patients.

## EMR Integration Features

### Seamless Integration

VirtualClinic+ has full, two-way synchronization with OSCAR EMR.

### Easy Scheduling

Manage your availability for telehealth appointments directly in OSCAR. We automatically sync to your schedule.

### Set and Forget

Template code matching allows you to easily manage your telehealth availability.

### Updated Records

Automatically create or update patient records. You can also enforce the roster status of your patients when booking for your family practice.

### Note Automation

Automatically add encounter notes and documents based on information from digital intake forms prior to visit.

### Quick Charting

Physicians can choose to chart directly in VirtualCare+, allowing for side-by-side notes and video. Encounter notes are automatically updated in OSCAR.
